

TEACHING ENGLISH LESSONS AND DESIGNING THE LESSON PLANS ACCORDING TO MODERN TECHNOLOGIES.

Tashkent Academic Lyceum No.2 of the Ministry of Internal Affairs of the Republic of Uzbekistan.

Amrullayeva Maxliyo Abdurahmonovna

Annotation. *The role and importance of informational and pedagogical technologies have been determined, as well as the effectiveness and expediency of their introduction into the educational process of the educational establishment has been substantiated. The modern innovative pedagogical technologies of teaching English for future preschool teachers and primary school teachers are considered. The purpose of learning a foreign language is to form an educated person, capable of engaging in intercultural communication and solving linguistic tasks.*

Key words: *foreign language teaching, foreign speech activity, teacher, university, competence, teaching.*

Nowadays modern technologies in the educational process have been developed. Educational technology can bring another culture into classroom. Using educational technology tools that connect to foreign lands and display how others live allows students to see and experience language in a whole new way. It is a new approach to learning foreign language, it brings new forms and methods of teaching. The main goal that we set for ourselves, using modern technologies in learning a foreign language it's to show how technology can be effectively used to improve the quality of teaching foreign language students, the formation and development of their communicative culture, learning the practical mastery of a foreign language. modern educational technologies are enriching our education system.

Besides the main goal of the modern teacher is to choose the methods and forms of organizing the learning activity of trainees, which optimally meet the goal. In recent years, the usage of new information technologies in schools has been raised increasingly. Since the main goal of teaching foreign languages is the formation and development of a communicative culture of schoolchildren, the training of practical mastering a foreign language, the use of computer technology,

Multimedia is a recent and popular term in the field of computer usage. Generally speaking, multimedia is the combination of text, sound, pictures, animation, and video. In the context of teaching, multimedia can be called an integrated media, which consists of various media forms such as text, graphic, animation, audio, etc. to browse, query, select, link and use information to meet pupils' requirement. Smith and Woody defined multimedia as "the use of both visual aids and verbal descriptions to illustrate concepts". With integrative CALL, teachers were moving away from

communicative perspective of teaching to a more social way, which emphasizes the language use in authentic social environments. Applying this multimedia networked computer in the language class provides pupils a more effective means to learn English. For instance, pupils can have rapid access to the background, grammatical or vocabulary explanations, pronunciation information while the main lesson is in the foreground. Besides, pupils under this model are usually encouraged to engage in their own language development rather than learn in a passive way. The history of CALL suggests that multimedia can serve a variety of purposes for language teaching. It can serve as a tutor to offer language drills or a stimulus to stir pupils to think. With the advent of the advanced technology and internet, computer usage in language teaching provides an authentic environment for pupils to communicate with native speakers in an inexpensive means.

Designing lesson plans according to the modern educational technologies is effective way to teach pupils foreign languages. For instance, using modern technologies during the lesson help pupils learn visually and it improves their thinking abilities. And it has a lot of advantages. The followings:

Allows pupils to practice and improve their public speaking and presentation skills.

Going on a virtual field trip to explore a museum, a zoo or bring an industry professional to the classroom.

Visiting another country or a state to learn what other students are doing and experiencing.

In conclusion teaching foreign languages by using modern technologies is the best effective way to give education. In the class teacher may use presentations, create a new atmosphere of the lesson. To comparing the past time lessons modern educational technologies turned the teaching methods in a new field. By the way teaching lesson plans formed according to the modern technologies. These approaches improved pupils knowledge effectively.

Annotation: Language and gender studies are increasingly becoming gendered and discursive. The study of speech and gender is an interdisciplinary work of scholars in linguistics, anthropology, speech communication, social psychology, education, literature, and other disciplines. Many researchers have been primarily concerned with documenting gendered patterns of language use, but the field of language research has also covered many areas in which social and political aspects of gender relations can be seen.
