Annotation: *The article discusses application of information technologies in the state financial control system of the Republic of Uzbekistan. In addition, various information systems used in the state financial control system are described, such as electronic document management systems, monitoring and analysis of budget expenditures.*

Keywords: *database, creation of a unified information platform, electronic document management, data transfer, fight against corruption.*

INTRODUCTION

The system of state financial control in the Republic of Uzbekistan is undergoing significant changes, which are mainly associated with the introduction of modern information technologies. Nowadays, in the context of the rapid development of the IT industry, the use of information technologies is a necessary condition for ensuring the effective functioning of the state financial control system. One of the main achievements in this area is the creation of a database. With the help of these databases, state auditors can quickly obtain information about financial activities. executive authorities and other organizations. Databases contain information about budget plans, financial reports, the use of public funds, and other data related to public finances. Thus, the creation of databases is the most important component in the development of the state financial control system. At the same time, an important part of the application of information technologies in the state financial control system is the use of an electronic document management system. It allows you to automate the processes of preparing and transmitting documents, and also increases their security. The electronic document management system speeds up the process of checking financial activities and increases the accuracy and timeliness of information received.

"INNOVATIVE ACHIEVEMENTS IN SCIENCE 2024"

As part of the application of information technologies in the system of state financial control in the Republic of Uzbekistan, electronic platforms for filing tax reports and paying taxes were created, which simplifies the procedure of tax accounting and calculations, as well as reduces the time spent by taxpayers. In addition, an important component of the development of information technologies in the state financial control system is the creation of a single information platform for data exchange between various state financial control bodies. This platform allows you to reduce the time spent on data processing and transmission, provides the ability to quickly analyze data and develop recommendations for optimizing budget expenditures.

One of the achievements of using information technologies in the state financial control system is the development and implementation of the Electronic Budget system. This system provides access to information about budget revenues and expenditures, which increases financial transparency and openness. In the "Electronic Budget" system, you can find information about public procurement, expenditures on education, health, social security, and other categories of expenditures. It should be noted that the use of information technologies in the state financial control system of the Republic of Uzbekistan is not only an important condition for improving the effectiveness of control over public finances, but also contributes to the fight against corruption. Information technologies ensure transparency of budget processes, which makes it difficult to commit corruption.

CONCLUSION

In general, the use of information technologies in the state financial control system of the Republic of Uzbekistan is a key factor in the development of a modern system of control over public finances. It ensures the interaction of various state financial control bodies, increases the effectiveness of control over financial transactions, simplifies budget planning and execution procedures, and increases financial transparency and openness.
