TECHNOLOGIES FOR DEVELOPING THE SPEECH OF PRIMARY SCHOOL STUDENTS BASED ON MULTIMEDIA TOOLS

Artikova Nozima Muxiddin qizi

Abstract: *This article discusses the forms, methods and means of developing the speech of primary school students using multimedia tools. The importance of multimedia tools in developing students' speech skills, their introduction into the educational process and their effectiveness are analyzed. The article shows the role of interactive games, audio-visual materials, presentations and other multimedia elements in increasing students' interest and motivation. It also highlights the possibilities of improving communication, listening and understanding skills using multimedia tools. The results of this study can help teachers conduct their lessons more effectively.*

Keywords*: multimedia tools, primary school, speech development, teaching methods, interactive games, audio-visual materials, communication skills, educational process, teacher, student motivation.*

Today, the role of multimedia tools in the educational process is increasingly increasing. They play an important role in increasing students' interest, making the material more understandable and interesting. The use of multimedia tools in developing speech, especially for primary school students, gives effective results. This article examines the forms, methods and tools for developing the speech of primary school students based on multimedia tools.

Multimedia tools are tools that combine different types of information (text, audio, video, graphics) and serve to make the learning process more interactive and interesting. They are important in attracting students' attention, better assimilation of the material, and the development of speech skills.

Developing the speech of primary school students is a set of activities aimed at developing the speech skills of students in the educational process. This process helps to improve the students' skills of expressing their thoughts, communicating, listening and understanding. Developing speech is also important in the development of self-expression and creative thinking.

The main goals of developing speech:

1. Expressing thoughts clearly: Students learn to express their thoughts clearly and intelligibly.

2. Developing communication skills: Improving students' communication skills, developing questioning and answering skills.

3. Listening and understanding: Students improve their ability to hear and understand the speech of other people.

4. Developing creative thinking: To increase students' creative thinking skills and encourage them to develop new ideas.

5. Increasing self-confidence: To increase students' self-confidence by gaining confidence in expressing their thoughts.

The process of developing speech is carried out through various methods and tools. Multimedia tools, interactive games, group activities and creative tasks are used in this process. Teachers should develop their speech skills by conducting interesting and interactive lessons for students

Forms of developing speech based on multimedia tools:

1. Using multimedia tools in the lesson process:

– Developing students' listening and comprehension skills by using video and audio materials during lessons.

– Communicating with students using interactive presentations, asking questions and discussing answers.

2. Group activities:

– Divide students into small groups and involve them in preparing joint projects using multimedia tools. In this process, speaking skills are developed through mutual exchange and discussion.

3. Self-assessment:

– Give students the opportunity to record their speeches and then analyze them. This method creates the opportunity to evaluate and improve their speech.

Methods of developing speech based on multimedia tools:

1. Learning method: – Learn new words, phrases and grammatical rules using multimedia materials. For example, introduce new topics through video tutorials.

2. Communication method:

– Engaging students in communication through interactive games and simulations. Through this method, students develop their skills in expressing their thoughts and communicating.

3. Creative activity method:

– Encouraging students to write a story or essay using multimedia tools. In this process, their creativity and verbal thinking skills develop.

Multimedia tools used to develop speech:

1. Video tutorials:

– Preparing interesting and understandable video materials for students. They help in mastering new topics.

2. Audio materials:

– Developing students' listening skills through audio books or podcasts.

3. Interactive programs:

– Developing self-assessment and speaking skills using interactive programs designed for students.

4. Mobile applications:

– Communicating with students through mobile applications specially designed for use in the educational process.

Multimedia tools are important in developing the speech of primary school students. They make the educational process interesting and interactive, increase student interest, and develop speaking skills. By choosing the right form, methods, and tools, teachers can conduct their lessons more effectively. In the future, the wider use of multimedia tools will serve to improve the quality of education.
