Kalit so'zlar: *ta'lim, texnologiya, tarbiya, madaniyat, manfaat, axloq, vatanparvar, urf-odat.*

Human interests and well-being are reflected in the center of the reforms being carried out in our country. The upsurge observed in every sphere is primarily due to the maintenance of peace, mutual harmony between nations, religious tolerance. The issue of youth education, which forms the basis of society, and their social activity is always relevant. In our country, behind the provision of wide opportunities to young people, the task of increasing their social and political activity, forming their moral and spiritual maturity, broad worldview, and high spirituality is set. After all, "Educating our children as independent thinkers, who acquire modern knowledge and skills, who have a solid life position, and who are truly patriotic is always an urgent issue for us"⁹.

It is the need of the hour to form the spirit of patriotism, to develop loyalty, national pride and pride in young people, to educate them as selfless, active people, and to educate them as people who are responsible for the development of their country. Therefore, the following criteria play an important role in the formation of the developing young generation into highly spiritual and moral individuals. "Several thousand years of religious faith, education, as well as all fields of science and the thinkers who played an important role in their development and their works, the cultural heritage of our people" and an "family, tradition, ceremony, holidays, other factors related to lifestyle"¹⁰ are among them.

From this point of view, the "Idea of National Independence" subject was introduced as a subject in general secondary schools for the creation of educational programs and introduction to the republican education system. In the conditions of globalization, the role of social and humanities in the education of young people in the preservation of love for the

Motherland and national identity is extremely important. Especially in the years of independence in our country, a lot of attention has been paid to the science of the national idea¹¹.

In particular, in the address of the President of the Republic of Uzbekistan Shavkat Mirziyoyev to the Oliy Majlis on December 28, 2018, he mentioned the following points: we need to develop. We need to realize our national identity, study the ancient and rich history of our country, strengthen scientific and research work in this regard, and support the activities of scientists in the field of humanitarianism in every way¹².

It is known that various ideological and ideological struggles have been observed in the history of mankind. In some of them, the forces of goodness, and in others, the spirit of destruction won. Historically, it is observed that such struggles have reached their climax as the development of the individual develops. Such processes are also at the root of the current complex and turbulent landscape of the world. In such a situation, the national idea, which embodies the unique mentality, outlook and values of the Uzbek people, becomes our main means of struggle, our source of salvation. It helps to educate these young people in the spirit of patriotism. Understanding the national identity first of all begins with knowing who each person is, what kind of nation he is, his history, and the heritage of his ancestors.

It should be noted that promoters of "Popular Culture" seek to hire world-renowned "Stars" of various fields to broadcast mediocre products. With the help of the created method, people's taste is first killed, they are alienated from the original values, and a mass (mass, ordinary people) consumer society is formed. Therefore, the main task is to fight against the influence of "mass culture" among young people. In this regard, the way to revive the values of our national culture, education, and spiritual heritage was chosen. Uzbekistan was the first among the countries of the Commonwealth of Independent States (CIS) to introduce the basics of religious studies in schools, colleges and institutes.

"Ministry of Innovation of the Republic of Uzbekistan" of the President of the Republic of Uzbekistan dated November 29, 2017 in order to educate and educate young people in our country on the basis of foreign experiences, modern breakthroughs and innovative ideas of world science at the level of modern requirements. The Ministry of Innovative Development of Uzbekistan was established on the basis of Decree No. PF-5264 "on establishment"¹³. It is necessary to support innovative technologies, to organize classes using innovative technologies in teaching all subjects, including the subject of National Idea, to provide education to the students based on the requirements of the time, because the youth are the future of the state.

In turn, it is gratifying that today the "Youth Affairs Agency" is implementing exemplary projects in this regard. At the center of the projects lies the goal of helping young people to choose the right way of life, to be ready for the bright future of our Motherland with their talent and potential. In the field of introducing innovations to social development: promoting innovation in the education system, including through the introduction of modern,

interactive and creative methods of teaching, promoting the development of innovative curricula that involve the extensive use of digital technologies provision is defined as one of the main tasks.

Issues such as protecting them from the negative effects of today's globalization processes, inculcating religious tolerance, studying our national traditions and spiritual heritage are important at youth conferences. In the stable development of our country, the role of high spirituality and ideological immunity of the people of our society is of great importance. It is worth noting that the enormous potential of new information technologies has turned information into the most powerful tool of geopolitical influence, because spirituality, national ideals are among the main criteria that determine the development of society, the maturity of the nation, and the perfection of the individual.

Within the framework of the disciplines of "Basics of Spirituality", "Cultural Studies" and "National Idea: Basic Concepts and Principles", it creates the qualities of intellectuality, sophistication and perfection in young people, and forms a worldview based on principles such as patriotism. Organization of lessons on the basis of innovative technologies contributes to the further development of young people's worldview. There is a wise saying in our people that "Education and education begin from the cradle". Therefore, only enlightenment leads a person to maturity and society to progress.

Innovative technologies are not formed by themselves, that is, they require traditional teaching methods to be conducted on the basis of modern pedagogical technologies. As time progresses, improving the lessons at the level of modern requirements will give good results in the future. Therefore, in building a great future, a great society, it is of particular importance to develop the sense of patriotism in young people and educate them to be morally perfect.
