

## EDUCATION OF A SENSE OF SELF-KNOWLEDGEMENT IS THE AXIS OF THE SPIRITUAL AND MORAL MATURITY OF ADOLESCENTS AND YOUTH

Ayubzoda Manizha Zokir

*Associate Professor, Department of Foreign Languages and Intercultural Relations, Faculty of Humanities and Education, International University of Tourism and Entrepreneurship of Tajikistan*

Education feeling self-knowledge one of the issues important pedagogies is considered a science go, at the same time one of the issues central not only pedagogical theory, school and family, but one of the most important problem policy society also counts is leaving.

Any year we young people many on the way independent life and labor farewell We do. Teachers and parents constantly I have a question to ask. bring, that is essence a person who education First of all, what do we do? expression Father and mother mothers and teachers simultaneously idea others should also be worried bring, that is them how to breed Bringing a teenager into life great society entering, thereby introducing a person to society complete the task deliver.

Father and mother mothers and teachers must effort to spend give that pillars following upbringing feeling self-awareness in the institution generation teenager formation give: upbringing kindness, goodness, loyalty, compassion, patience, steadfastness morality, alphabet culture morality, empathy, habits morality, kindness and etc. Of course. It all depends on it. is that in adolescents young people values moral-ethical what kind of formation The philosopher A.I. Tarasenko noted It seems that «morality» for human role The irreplaceable «compass» of behavior execution it seems that possibility gives person effectively position yourself in life public, world special culture, world values social certain to do [6, p. 99].

In the generation teenager formation and education to make feeling self-knowledge on condition fruit hearts given maybe if you do this still from the beginning childhood «It is in childhood that heart full of influence feelings is, we can in front of children standards morality universal clear and clear open, alphabet morality we are teachers» [7, p. 160].

Backgrounds origin feeling self-knowledge national first in the family found Background main in generation teenager formation giving worldview, beliefs behavior morality and habits goodness humanity in the family put Therefore, the effect of father mother in foster care values spiritual - moral child finally big is.

Available existence relationship healthy family, orderly existence life intrafamilial each of its members, feeling to do joy and joy and spacious possibility gives that in such families calm, calm, energetic, and cheerful people grow up. At the same time, in such family's children skill to be able to overcome problems and being able to live in a team memory they take.

Formation feeling self-knowledge to know perception to make your duties towards change, society, values morality, human beings other, destiny and good luck life is. Feeling self-knowledge gem moral is that formation human perfect society depends on it has a lot.

Feeling Self-knowledge, this loyalty citizenship to ideas and dreams, being able to subdue self-interest for the benefit of common, deprived to create oneself from goals personal sea climbing to the top high aspirations, implacability towards the enemy, and preparation forgiveness make a living on the road honor, mercy and fame change and being able to do good to people is.

Feeling self-knowledge inner judge human and most important motivation conscience is. At the same time, for human feeling to make feeling self-knowledge from that point look dignity expensive found does so without realizing it, he violates the laws noble morality human can't imagine.

Psychologist N.D. Levitov during formation giving feelings Morality has three tasks: education. feelings positive (good); control and regulation feeling, struggle towards feelings negative [3, p.225].

Care person to person from life with joy, anxiety excitement, pain torment others beginning If a person fails to notice that happiness truth humanity, his success depends on the support others dependent is, he is capable being can't help but feel gratitude impressed Happiness truth human It is a spring that feeling the loan happiness Therefore, it achieves to become It is necessary that in the heart generation teenager gradually from the beginning childhood feeling self-knowledge formation Let's give.

Suspicion We assume that the armed man with the «sword» of self-knowledge all kinds of castles ugly evil conquest will do. Correct, is that heart human unfit and ill-mannered with love to impress is to do something. difficult. Difficult is, but failure impossible both no.

It should be noted that teachers and father mothers with way education cultivation analysis to do that that generation teenager with any a priceless lesson feeling self-knowledge learned can and by the grace of this expression yourself introduction education to do this. more belief found to do that upbringing real somewhere head. It happens that there unity education and self-discipline exists is, but this unity only under certain conditions possible is that human something dear.

The way peak upbringing feeling self-knowledge to search for it is necessary that teenager or young person from the first steps life alert relative destiny humans with heart feeling to make, destinies people A stranger entered his heart. and destiny himself to be, through destiny people way knowledge interests high to find and His dream is loyal to his homeland. to serve. He is for honor, glory and interest dreams merit human effort to them close to be seen and can embody them in oneself.

If the father mothers and teachers they want to human self-aware education to do, relationships mutual them with people must like that recovery to pretend that their lives to others people dedicated can. This is the highest debt Humanity.

Ability to demand from oneself to leave, to obey one's conscience, to depend on it is that teenager and What is the young man from? sources joy and Happiness eats water.

Very sad is life teenagers who «parent's kind» whole wishes them satisfaction they turn and them sadness anger They don't know. Education teenager in spirit carefree and flood to be free from pleasures endless, selfish and incompatibility wish raise demands it makes him / her feel uncomfortable consumption blessings wish another in the heart

Children who enjoy this kind of « happiness » they have lifted, people finally are unfortunate, have morality community we available them No. If the school meaning fatal happiness self-will perception A lot of work needs to be done. bring that principal truth humanity in man discovery to do.

Ideal educational teachers and parents should be visible in it find that teenagers' luck yourself in the family society in turmoil, unrest and anxiety The reader who near parents yourself defendant considers, of them Do the impossible. demand does not and father Not only the mother those knows that give birth to him have brought, but they still as those knows that incarnation alive debt society and homeland are.

Undoubtedly, in society we people encounter are going to help they need, they want Let's bring them a bucket of water, chop their wood, and providing them with bread Let's do it. At the same time people many can be encountered is to be sincere, compassionate and to the word good are needed. Skills perception to make people who needy they are helpful, from the spirit strong child tree gives and This is exactly where he should learn a valuable lesson. self-knowledge feeling to do

In my opinion We, the child, are not born as scholar observer cold-blooded, but as personality active input required is. Child must relation events world position, point look and connection have, is this really problem central upbringing feeling self-knowledge national is leaving.

Therefore, the effort to do necessary in the generation teenager, partner of joy, sadness s and troubles other people to become habit to do. Foundation sensitivity compared to joy and sadness only can be at the time childhood schoolchildren put yourself in place someone other imagine being another person It will be.

The lack of educational work many teachers in it turns out that world spiritual the children only through to assess knowledge them size they do, that is all the students depending on the lessons to prepare or not to prepare them is twofold. group separate They do. Do a teacher who formation personality schoolchildren That's how it is understood, isn't it? Can educator good What if the teacher thought to do that only when lesson to student's impact upbringing. It is necessary to talk about this. No. What is more important is that teacher school days existence the children to them what as much joy and joy dedicated can. And that is also very important. is that every child joy and not that feeling to do it, but also to create it yourself, to add a bit of your creativity to the life of the collective.

In that place where compassion perception world surroundings no, children They grow up hard -hearted. Sensitive Impulsiveness during childhood formation It is found. In the childhood formation giving quick-tempered, from the background stable in generation teenager formation giving feeling self-knowledge is. In the generation teenager upbringing feeling compassion and sharing in sorrow sadness others task important teachers and father mothers is. Man is only on one condition. can friend, comrade and brother someone other let it be sadness him/her sadness know your own.

If a teenager towards a friend, relative, or father his mother and everyone who encounter does, indifferent if the child looks into the eyes someone other look thrown, from the heart he doesn't know, he doesn't know sometimes a real person will not

Therefore, education generation teenager should be done as usual left may it be that the emotions, anxiety, joy and sadness people who not only every day, but by chance both encounter they do, in their appearance to see.

In public to live meaning it has that someone for improvement and peace others with joy giving up your passion can. Such action for generation This is upbringing. feeling self - knowledge goes. In life such both it will be that mother wants child protect yourself from all kinds of incidents keeps the sad away and thus joy and sprout his child a particle little It doesn't. I think we the child, in terms of cheerful life human nothing sometimes it is necessary to remove no. Therefore, in such a case family selfish, self-interested, people compared to misfortune and troubles others They grow up carefree. Let children know that in life not only human joy and joy, but also sadness There is also sadness. Let it be. sadness others to the heart children road find.

Power great the spiritual, which teenagers' polite makes, good deeds for people One of the tasks is educational the school consists of is that child heart feeling to make people around him They are there to help, to care, to caress. sincerity and sympathy needy. Many important is conscience Don't leave the children alone until they are out of sight. such people indifferent past process. Therefore, the sea of that effort to do necessary, that teenagers don't talk to anyone purpose from others to distinguish, but impartially goodness to do They are educated.

To the generation teenager always It is necessary to teach that emotion and situation spiritual others feeling to put themselves in their place someone It seems that he is sympathetic and help and care sincerely needy at the same time, the sea of that effort to do necessary, that children in thought. How to help a person in need be, that is, of all more important to children sympathy It is necessary to teach.

Often time teachers and father mothers forget they do that worldview schoolchildren human perception them start becomes. Manifestation goodness and evil before all else teenager in a relationship father sees his mother. In that his father to his mother with what melody application seems, feeling and look His movements have a meaning. certain expression They do. This place teachers one thing is necessary confusion to make, in some families between father mother and children respect mutuality existence does not have.

Must note It seemed that if in Talbak Lolaev in the district Dangara grain field ignited wanted silence to do, but to the point of fire fall, perish will be) feeling self-knowledge formation He couldn't find it, he was looking from the side. grain field ignited silence past He was going. He had the courage many moralities show given, part many grains field ignited silence seems, but in the circle fire to fall, to perish Of course, it follows from this that Talbak Lolaev in the family and school lesson good upbringing self-knowledge nationally It was.

Ideal educational teachers and parents should be visible in it find that children luck yourself in the family society in turmoil, unrest and anxiety One of the aspects of important education, in the opinion we, this is in the institution boy feelings impression spiritual strong and care strong stable to build. The reader who near parents yourself defendant considers, of them Do the impossible. demand does not and father Not only the

mother those knows that give birth to him have brought, but they still as those knows that incarnation alive debt society and homeland are.

Thus, we expression I have that:

1. Spirituality and humanity border yes, but inhumanity Not immoral.
2. We must generation teenager for not today, for tomorrow, for better to build life future Let's educate.
3. It is necessary to try to the children only for behavior their good deeds reward let's not, because them further only for benefit relative goodness They will do it.
4. Achieve it to become necessary, that teenager's young people their thoughts change improvement given can.
5. It is necessary to try to instill in adolescents and young people self-improvement formation find.
