

## THE IMPORTANCE OF DISTANCE EDUCATION IN PRESCHOOL AND PRIMARY EDUCATION

**Toshboyeva Dilnavoz Abduraxmat qizi**

*Jizzakh State Pedagogical University. External department. Department of distance education in preschool and primary directions.*

*toshboyevadilnavoz4@gmail.com*

**Abstract:** *Distance forms of education are becoming increasingly popular in modern society. This process is also observed at the preschool and primary education levels. Distance education allows students to enrich their knowledge and develop new skills without geographical restrictions.*

**Key words:** *distance education, distance education, distance education in higher education, virtual learning management system, distance education system, online education, online courses, electronic education.*

One of the main advantages of distance education is the absence of time and space limitations. Students can study from anywhere at their convenience. This is especially convenient for children who live in rural areas or have limited access to preschool education.

### Technology and Learning Resources

The use of technology in distance education is important. With the help of modern educational platforms and applications, students can use various interactive materials and educational resources. This increases their interest in the educational process and improves the quality of education.

### Changing Role of Teachers and Parents

In distance education, the role of teachers and parents also changes. Teachers should use more creative approaches in preparing teaching materials and conducting lessons. Parents are required to actively participate in the educational process of their children and support them.

Distance education describes the use of information technology for distance education in modern society. This form of education allows students to enrich their knowledge and develop new skills without geographical restrictions. Let's take a look at the main points below:

1. **No Limitation of Time and Space:** Students can study from anywhere at their convenience. This is especially convenient for children who live in rural areas or have limited access to preschool education.

2. Technology and Learning Resources: The use of technology in distance education is important. With the help of modern educational platforms and applications, students can use various interactive materials and educational resources. This increases their interest in the educational process and improves the quality of education.

3. Changing Role of Teachers and Parents: In distance education, the role of teachers and parents also changes. Teachers should use more creative approaches in preparing teaching materials and conducting lessons. Parents are required to actively participate in the educational process of their children and support them.

4. Content-Essence: Distance education is increasingly used as an effective and convenient method of education, both at the preschool and elementary education levels. This form of education expands children's learning opportunities and equips them with the skills they need to be successful in the future.

In order to ensure the continuity of the educational process in the republic's higher education institutions and to provide methodical support for students' learning from a distance, distance learning platforms have been launched since April 1, 2020. Such platforms, first of all, gave students with the opportunity to organize the educational process in a completely new format, that is, by forming an audience of students and teachers in a virtual environment. Distance learning system (Distance Learning System) is an organization of distance learning, an additional support system for the educational process, electronic document circulation, creation of electronic educational materials, management within the studied subject and is software for evaluating progress and advising. Distance education implies the active use of Internet technologies that allow teaching when the teacher and student are far from each other. Now Internet or local computer networks are used for this purpose. The modern field of education offers several forms of education: full-time, part-time, evening, extramural and distance learning. Distance education is the most suitable education for the modern level of society's development according to current requirements. Unlike classical forms of education, distance learning is carried out using all the latest innovative, technical achievements in the field of telecommunication technologies and the Internet. Distance learning systems allow to prepare schoolchildren, students, and workers for the workplace

Conclusion: Distance education is increasingly used as an effective and convenient method of education, both at the preschool and elementary education

levels. This form of education expands children's learning opportunities and equips them with the skills they need to be successful in the future.
