**Abstract:** *This article highlights the role of women, particularly girls, in acquiring education, its personal significance, and its decisive importance for the development of the family and society. The article analyzes the historical restrictions on women's education and the pioneering female figures who overcame them. In this context, under the conditions of modern Uzbekistan, the opportunities for girls to acquire education, the successes of women who have found their own paths through education, and their impact on the next generation are discussed and substantiated with solid evidence. At the same time, it was emphasized that for every girl, science and knowledge are not only about acquiring information, but also about free thinking, finding one's own path, earning respect within the family, and securing one's place in society. Furthermore, an educated woman is regarded as the pillar of society. The article urges young girls to pursue knowledge, engage in research, strive toward their goals, and improve their future lives.*

**Keywords:** *women's education, pillar of society, key to development, child upbringing, opportunities being created, personal maturity, women's thinking, the impact of knowledge,*

### INTRODUCTION

Women's knowledge is the pillar of the entire society.

In discussing this topic, today women are not only the pillars of the family but also exert a significant influence on society as a leading force in science, entrepreneurship, politics, and many other fields. This is not only an important element of today but was also regarded as a key factor in past eras. In modern society, the role of women is steadily increasing. Therefore, women's education not only provides knowledge but also enables independent thinking, problem-solving, and doubles the pace of societal development. However, we will seek answers to questions such as: "What was the attitude toward them in past centuries? Could the power of knowledge withstand state policy to enable them to become scholars? Is women's pursuit of knowledge beneficial only to themselves?"

2. Main section. Women's opportunities for education in the past.

If we look at history, there were many women who died illiterate because restrictions prevented them from receiving an education. Such situations were especially common during wartime. They did not focus on their own future lives but devoted all their strength and energy to raising their children and acting as fathers in their fathers' stead. However, in the centuries following the war, ideas took hold in the human mind that women and girls

were meant to be homemakers and manage the household, so no effort was made to provide them with educational opportunities. They were opposed to women even living, let alone becoming educated and building their own futures. Isn't that a terrible vice?

2.2 Just as a coin has two sides, there were women whose potential benefited the entire society. I regard such women as the mothers of great people. For example: Edison, who invented the light bulb, came home as a child and handed his mother an envelope, saying, "Mom, they sent this letter from school." The mother quickly glanced over the letter, then, with tears welling in her eyes, began to read it aloud to her little son: "Dear Madam! Your son is very talented. However, our school is too small for his abilities. He should be allowed to pursue independent education!" Years passed. Edison went on to make some of the greatest inventions in human history. After his mother died, Edison rummaged through her desk and found that letter. Imagine his surprise when he read that the letter said something entirely different: "Madam! Your son is slow-witted; he is not to come to our school starting tomorrow!" Edison wept for a long time. Then he wrote the following lines in his memory book: "Edison was a completely dim-witted boy. But thanks to his mother's devoted service, he became a uniquely gifted individual."<sup>19</sup> From this it is clear that the mother's knowledge in child-rearing revealed Edison's talent, which the whole world now recognizes. Moreover, "Many of the Prophet's (peace be upon him) wives were teachers of the rulings of Sharia, Qur'an-reciting qaris, transmitters of hadith, and jurists, renowned for their sharp abilities and rare intellect.

In particular, because our Mother Aisha had a thorough knowledge of mathematics regarding inheritance, even some prominent Companions would ask her for advice in dividing inheritances. Before the advent of Islam, people had no concept of fractions.

There was no jurist like our Mother Aisha who knew the rulings on inheritance so thoroughly and could apply them so expertly."<sup>20</sup> How wonderful it is that in Islam, women are commanded to acquire knowledge on the same scale as men. Since women's status and worth were considered immeasurable, the Companions did not hesitate to seek knowledge from our Mother Aisha. Thus, every woman's being educated has a profound impact on the lives of those who come after her as well as those around her.

3. Who else does women's education affect? Undoubtedly, every person who studies and researches to become a proficient specialist in a field gains their own place in society. When I overhear some men talking like that, I feel hatred: "Don't marry an educated girl; later she might use her independent thinking to oppose you and lecture you." What a perfect example of shortsightedness—they think like that, unaware that their children will be born with low intelligence and struggle to be independent.

They say a woman is half of society; no, she is all of society. She is half of society and nurtures the other half. How great is a woman's religious, social, and political importance. She is a mother and a grandmother. She is a wife, a sister, a daughter. She is a tutor, an intellectual, and a singer of goodness. Ahmad Shawqi said: "The mother is a madrasa. If you prepare her properly, you will raise a pure-blooded people." That is, the mother's potential influences her child's. Each of their abilities begins to form in the mother's womb. From an ignorant, uneducated father, wise, learned children may be born, but from an uneducated mother, no intelligent child will ever be born. Thus, women's level of education plays an important role both in their own lives and in the lives of their children. To give my own example, there are three of us daughters in our family, but my father wouldn't trade us for three hundred sons. I am deeply grateful to them for doing everything in their power to support our education, for creating every possible condition, for helping us learn in various fields, and, most importantly, for being my father. Because their help in our education will inevitably influence the generations of our future. For every parent, there is no greater happiness than seeing their child's perfection. It is fitting to note here that Abdulla Avloniy wrote: "Girls need to acquire knowledge more than anyone else... must strive more than anyone else, for with this knowledge they will educate the coming generation,"<sup>21</sup> he wrote. Indeed, it is extremely difficult to imagine progress without addressing this issue. Thus, the advancement of the next generation lies in the hands of women.

#### Conclusion.

As we all know, a woman's education serves as the foundation for building her future. "Does a woman have to be educated?" – the question begins with all of us standing together and loudly declaring, "Yes, she must." Education is the foundation of a woman's outlook on life, her thinking, her values, the upbringing she imparts to her children, the culture of relationships within the family, her patience, and her manners. If a woman is uneducated, how can she cook nutritious meals, interact properly, understand her spouse's psyche, or teach her child? knows how to read books and answer their questions correctly? Family is not just cooking; it is love, communication, patience, knowledge, upbringing, and environment! A knowledgeable woman is a light in the kitchen, before guests, before her child, and before her spouse. Because every one of her actions is rooted in understanding and insight.

Therefore, it is essential for a girl to receive an education. Whether she works or is a homemaker – she must be educated, work on herself, and be knowledgeable. Only then, wherever she is, will her respect, status, and worth stand out. And she will raise the next generation in a manner worthy of it.
